PHILIPS MR TEAM · ADVANCED AGENTIC AI PROGRAM · 4–5 NOVEMBER 2026

Participant Prerequisites

No coding background is needed. You will **write the spec** for an agent, **direct Codex** to build it, **review** what it produces, then **try to break it** and decide the guardrails. All tools run in your browser through your Philips **ChatGPT Enterprise** account; the agents you build use AI models hosted in Philips' **Azure** environment. Please complete this sheet **before 09:00 on Wednesday 4 November**.

Day	Your role
Day 1 · Wed 4 Nov	Write a spec for your team's use case in ChatGPT; have Codex turn it into a plan, tasks and a working agent app; review each step. Learn agent orchestration, MCP and Skills through live demos.
Day 2 · Thu 5 Nov	Learn why guardrails and evaluation matter (OWASP LLM and Agentic Top 10). Set the guardrail rules and pass thresholds, then red-team the Day 1 app by typing attacks into its chat screen, and confirm the fixes.

1. What you need — must-haves

- ☐ **Laptop with Chrome or Edge** (latest version). Bring your charger.
- ☐ **Network access** from the room's Wi-Fi or VPN to chatgpt.com and the workshop app link that UNext will share on Day 1.
- ☐ **ChatGPT Enterprise account** — you can sign in with your Philips login and use **Chat**, **Work** and **Codex**.
- ☐ **Codex switched on for you** — Codex appears in ChatGPT and replies to a test request. If it is missing, tell your organiser today: the Philips ChatGPT admin must enable it.
- ☐ Install the Codex app on your local laptop

That is all. **The following are not needed:** VS Code, Git or GitHub, AWS, or any other software installation.

2. Five-minute self-check (do it today)

#	Do this	You should see
1	Open chatgpt.com and sign in with your Philips account	Your Philips workspace name, not a personal account
2	In Chat, ask: "Summarise what an AI agent is in 3 bullets"	A normal reply
3	Open Codex from ChatGPT and send: "Say hello"	Codex responds (no error about access)
4	Check that Work is available in your account	Work option visible

Anything not working? Reply to your organiser with a screenshot before 18:00 today so it can be fixed overnight.

3. Bring for your team's use case

Item	What it looks like
Problem statement	3–5 lines: who uses the result, which decision it supports, what "good" looks like
Small sanitised data sample	CSV or Excel, 200–5,000 rows, with a one-line meaning per column. No patient, customer, hospital or personal names
10–15 test questions with answers	Checked by someone who knows the data — they become the Day 2 evaluation test
Your rules and limits	Metric definitions (e.g. how MTTR is measured) and what the agent must never do or say
A subject-matter expert	One person on the team who knows the data and can confirm answers

The readiness checklist workbook lists these items for each of the nine use cases.

4. Provided by Philips (organiser and IT) — by today

Azure-hosted model	Planned use in the workshop
Claude Sonnet 5.5	Main reasoning / orchestrator agent
Claude Haiku 5.5	Fast classification and summaries
GPT-5.5	Alternate orchestrator; side-by-side comparison
GPT 5.6 Luna	Role confirmed after the trainer's test
GPT-4.1	Fallback and low-cost baseline

- **For each model:** deployment name, endpoint, key or Entra ID access, and enough quota for ~30 people working at once.
- **Trainer access today** to all five deployments, including one successful Claude test call (subscriptions with zero data retention enabled can reject Claude requests).
- **Azure AI Content Safety** (Prompt Shields, content filters, PII detection) — replaces the earlier AWS Guardrails plan.

- **ChatGPT admin:** Codex and Work enabled for all participants. **Network:** Azure AI endpoints reachable for the workshop app.
- **Data approval** from each data owner to use the sanitised samples in the workshop.

5. Provided by UNext

- Ready-built demo apps to explain concepts prepared by the trainer and environment connected to the Azure models — nothing to install.
- Spec and AGENTS.md templates, sample data, Skills, evaluation set and red-team attack scripts.
- Trainer on site both days.

6. Ground rules

- **Philips ChatGPT Enterprise only** — no personal ChatGPT or other AI accounts for workshop data.
- **Sanitised or synthetic data only** — no patient data, PHI, customer or personal information in any prompt, file or test.
- Red-team only the workshop app — never Philips production systems. Work in teams of three: spec owner, Codex driver, reviewer.

READY FOR 4 NOVEMBER? Tick all six before 09:00.

- ☐ ChatGPT Enterprise sign-in works
- ☐ Work option visible
- ☐ 10–15 test questions with answers
- ☐ Codex replies to a test request
- ☐ Use-case data sample sanitised
- ☐ Laptop + charger packed
